Tutorial : Figure Holder

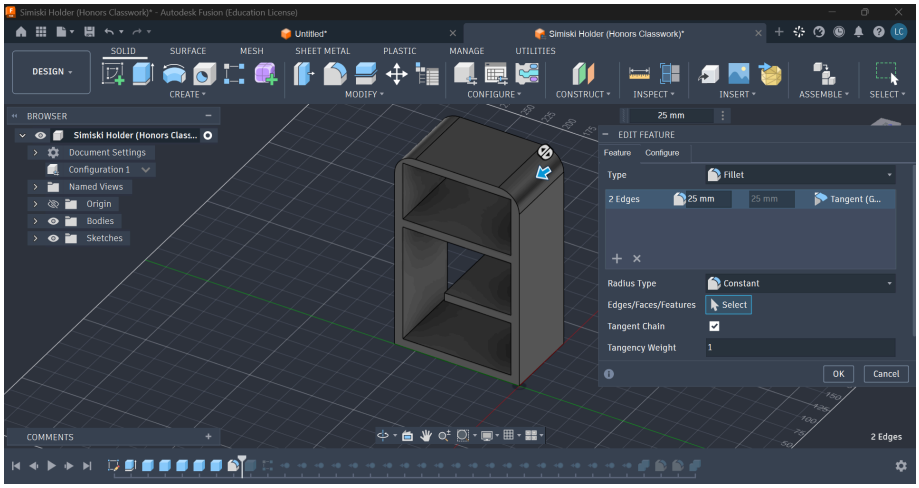

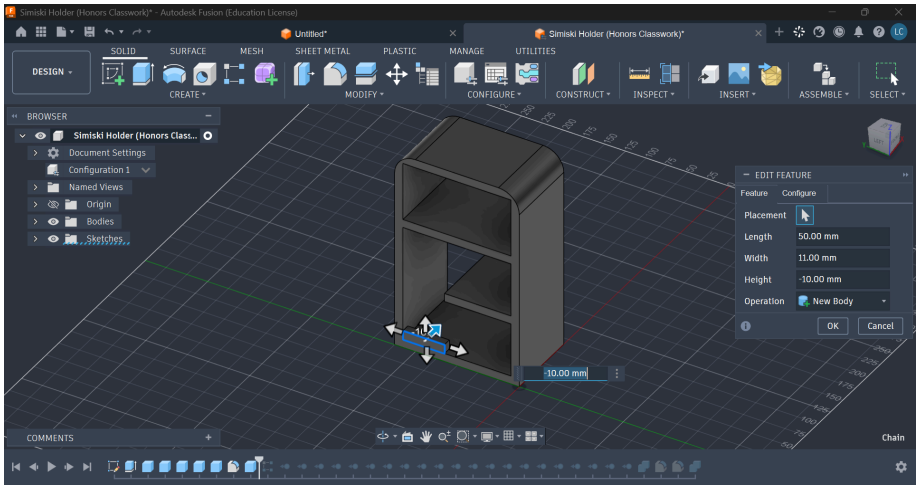

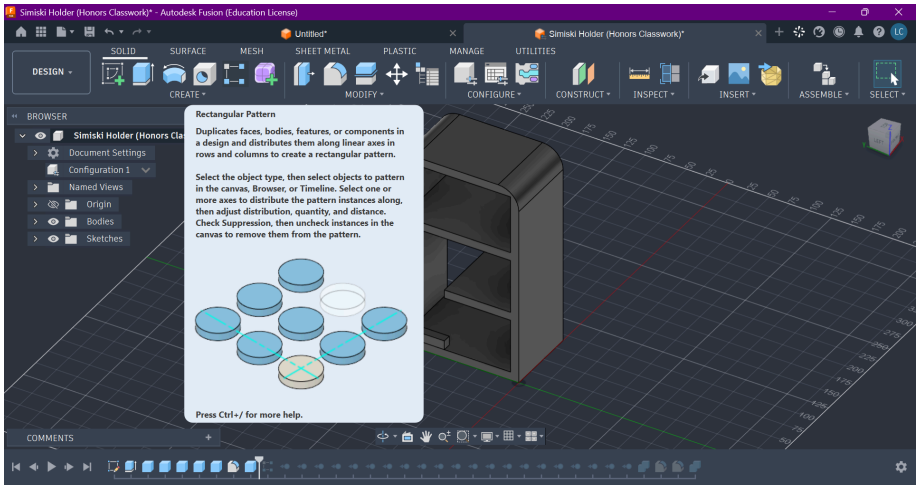

Description of Model: This model is for people to be able to put their figures nicely and neat

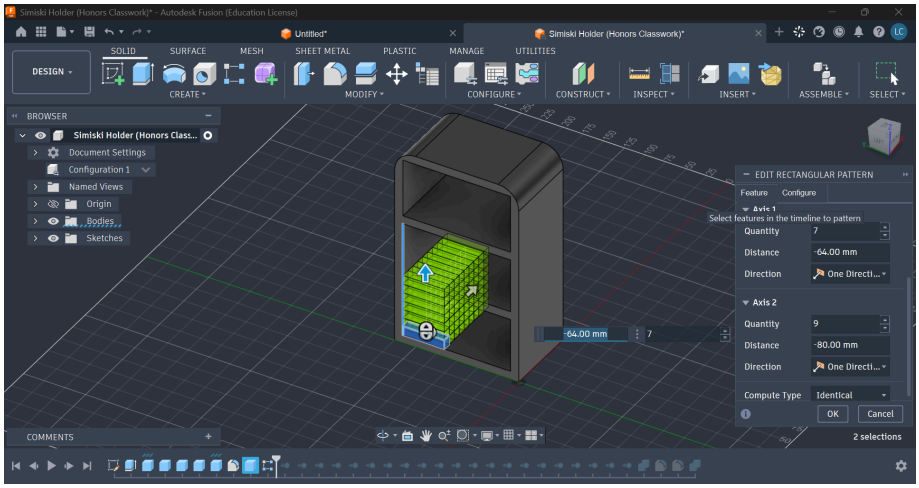

Steps	Images
Make a sketch using the rectangle tool Make the dimensions 150mm x 90mm	
Click extrude and extrude the rectangle to 10mm	
Go to Create and click on Box	

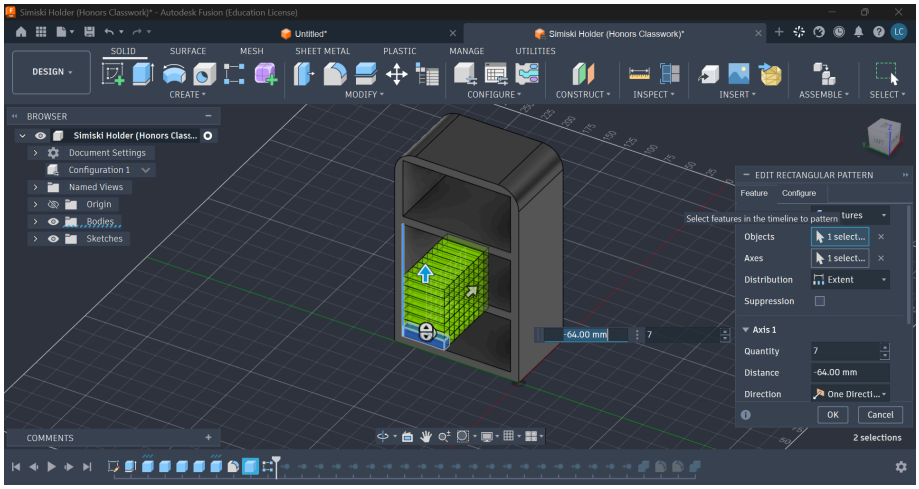

Put the point in the bottom left corner and make the rectangle upwards with these dimensions	
Click on Box and put the point in the bottom right corner and make the rectangle upwards with these dimensions	
Click on Box and put the point in the bottom right corner and make the rectangle horizontal with these dimensions	

Click on Box and put the point on the sides at whatever height you want and make the rectangle horizontal with these dimensions	
Click on Box and put the point on the sides at a lower height than previously, with these dimensions	
Click Fillet in the modify tab and choose the top two corners to make them rounded at a radius of 25mm	

	
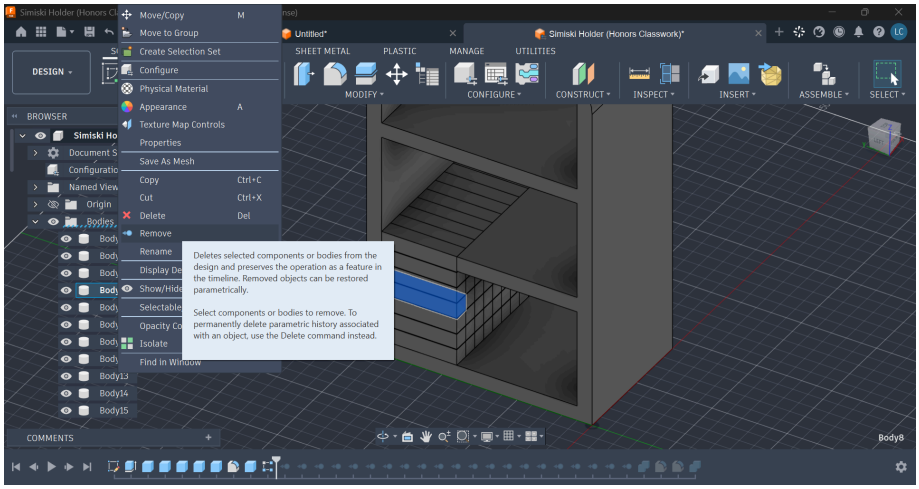

Click on Box and put the point on the corner at with these dimensions and create a new body	
Click the Rectangular Pattern	

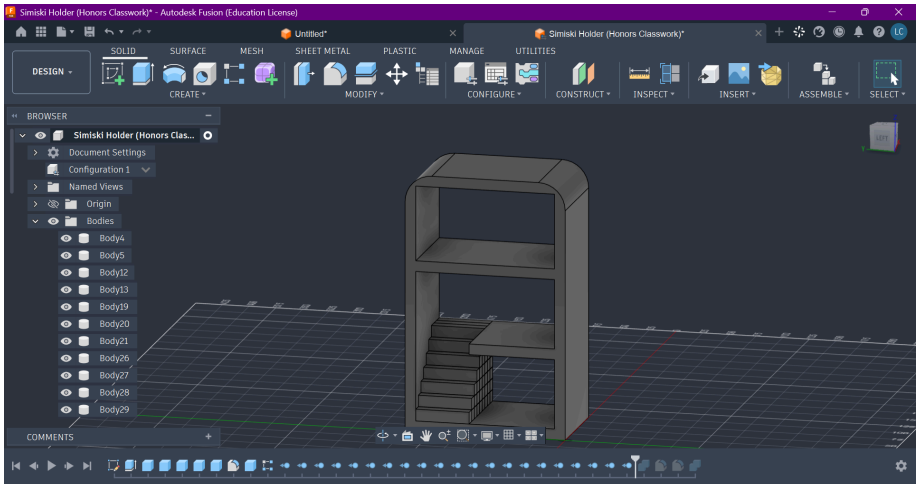

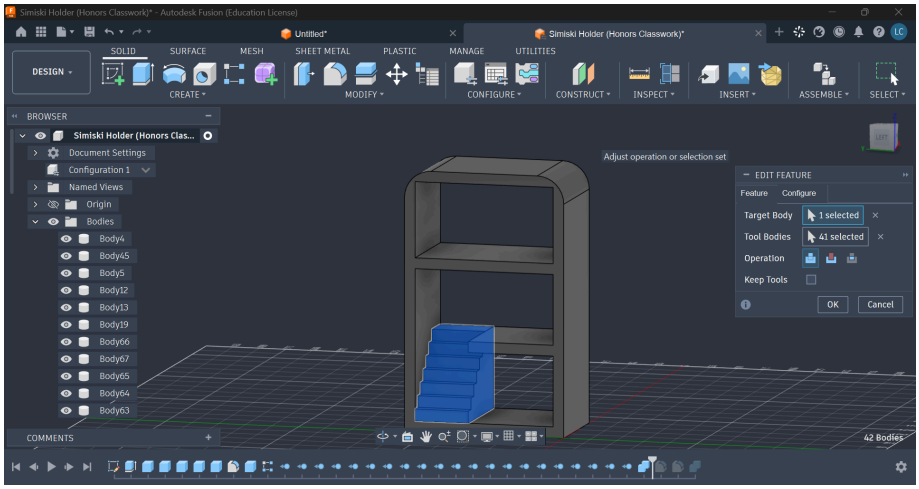

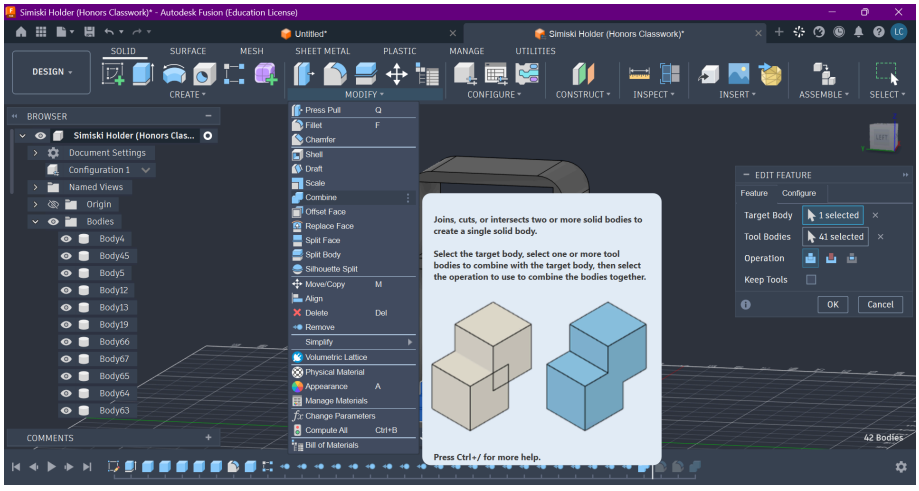

Click the small box that was just created and include the dimensions so it can end up reaching the top of the shelf on the first level

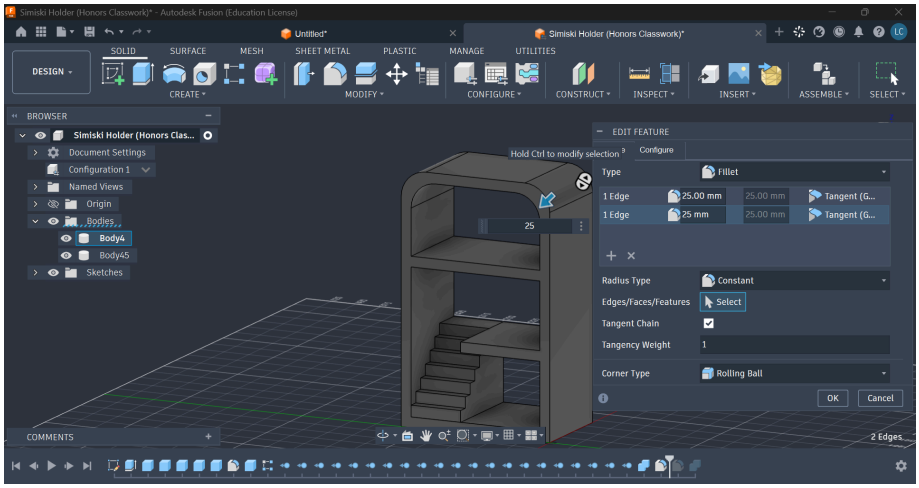

Select the Bodies that we don't want to be able to create a little staircase and right click on it to remove the body

After removing all the unwanted bodies, it should look like this	
Click the Combine button in the modify tab and select all the steps in the staircase, making it one total body	 

Click Fillet in the modify tab and choose the top inside top corners to make them rounded at a radius of 25mm	
Click the Combine and select all of the staircase and the shelf to make it all one body.
